The amplified sequence can be used in a recombinant virus used in the method of the invention. The method of the invention is for increasing ureagenesis by administration of a recombinant virus that expresses at least one enzyme of the urea cycle in vivo. The method is used to treat a genetic deficiency of a urea cycle enzyme (e.g. early onset hyperammonaemia and associated encephalopathy) or non-specific liver failure characterised by inadequate ureagenesis, e.g. where caused by cirrhosis or cancer. The urea cycle enzyme may be, e.g., carbamoyl phosphate synthetase, ornithine transcarbamylase, argininosuccinate synthetase, argininosuccinate lyase or arginase. This method is an alternative to liver transplantation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PCR primer; amplify; human; arginase; ureagenesis; genetic deficiency; urea cycle enzyme; early onset hyperammonaemia; argininosuccinate lyase; associated encephalopathy; non-specific liver failure; cirrhosis; cancer; carbamoyl phosphate synthetase; ornithine transcarbamylase; gene therapy; argininosuccinate synthetase; liver transplantation; ss.

```
recombinant vaccinia virus comprising of a gag gene from a retrovirus such as HIV-1 or HIV-2, fused to a DNA fragment containing an epitope region (30-300 bases in length) of a retroviral gene other than the gag gene. The gag gene may be altered so as to produce a gag protein modified from the natural sequence by the addition, deletion or substitution of at least 1 amino acid residue. The fusion gene is inserted into a region of a vaccinia virus not essential to its gropagation, to give a recombinant vaccinia virus vector which is used to transform a host cell (such as HeLa, Vero, VEF, rabbit kidney RKI3 or human myeloma TK-143 cells). Upon culturing the host cell produces particulate structures containing the fusion gag protein. The recombinant vaccinia virus or the fusion gag protein particles may be used in the production of vaccines for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes Secale cereale microsatellite markers based on hypervariable genomic segments of Secale cereale and plants of the tribes Triticeae and Poeae. The microsatellite markers comprise a simple sequence repeat (SSR) marker as sequence tag site (STS), defined by two specific S. cereale defined primers, of mean length 18-26 bases and flanking the microsatellite sequence (MSS). Such markers are useful for genetic analysis of rye, triticale and other species of the tribes Triticeae and Poeae, e.g. for DNA fingerprinting; identification of varieties; detecting self or cross fertilization; studying similarity and relatedness; characterization of cytological lines, or generally any sort of gene mapping. Particularly, they are useful for genetic mapping and marking of mono- or poly-genic traits, selection and evaluation of varietal purity or checking culture stages (particularly in hybrid culture methods), purity of propagative materials, success of self-fertilization and required ratio of components in populations and hybrids. AAX36902-X36965 represent PCR primers used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

XEEEX8X333333333333333333
                          DNA vaccines. The encoded protein and its fragments can be used to raise antibodies, in vaccines and for detecting S. pneumoniae, and in specific antibodies, and for detecting S. pneumoniae (by reaction with specific antibodies). Antibodies are useful in diagnostic immunoassays, to treat infections and to raise anti-idiotype antibodies for use in vaccines. This protein is very highly conserved between the different serotypes of S. pneumoniae so is an excellent candidate for vaccine development. (Updated on 20-MAR-2003 to correct PR field.)
Sequence 21 BP; 5 A; 4 C; 4 G; 8 T; 0 U; 0 Other;
                                                                                                                                                                                                                               recombinant protein, as a source of primers for amplification (to identify and isolate related sequences, e.g. alleleic variants) of for nucleic acid hybridisation tests for detecting S. pneumoniae,
                                                                                                                                                                                                                                                                                                    AAV73915 and AAV73916 are PCR primers used in the amplification and isolation of a Streptococcus pneumoniae 37-kDa surface adhesion A protein. The encoding nucleic acid can be used in methods to express
                                                                                                                                                                                                                                                                                                                                                                                                            Claim 5; Col 35-36;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ВP
```

This invention describes a novel method for the detection of tumor cells in a body sample which involves assaying for prepro gastrin-releasing peptide (preprocRef) mRNA. The method is used for the diagnosis of various tumors, e.g. bronchial, mammary, colorectal, prostatic and C-cell carcinomas and other neuroendocrine differentiated tumors or their metastases. Very small numbers of tumor cells can be detected both in tissue samples and in body fluids. AAZ23525-Z23532 represent PCR primers

Detection of tumor cells by nucleic acid amplification assay

WPI; 1999-552203/47.

                                                                                                                                                                                                                                                        This synthetic double-stranded oligonucleotide encodes a lysine-rich heptad repeat peptide. It can be inserted into the unique BarI site in the 'base gene' (see AAV99505) of vector pSK5 to provide repetitive heptad coding sequences. Chimeric genes for lysine-rich synthetic seed storage proteins suitable for expression in the seeds of plants have be constructed (see AAV99513-18, AAV99527-32, AAV99539-41). The invention provides methods for improving the nutritional quality of seeds from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids and chimeric genes for increasing seed lysine content - comprise sequence encoding all or part of lysine ketoglutarate reductase, useful to improve nutritional quality of seeds from transformed plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                used
                                                                                                                                                                                   Sequence 21

Typical applications are in DNA fingerprinting; identification of varieties; detection of self and cross pollination; characterization of cytoplasmic lines, and genetic mapping (of mono- or poly-genic traits). MSM show a higher degree of polymorphism than known markers (both within and between different rye varieties and lines); can be detected by polymerase chain reaction, so that even very small samples may be analyzed, and generate many alleles per marker locus. AAZ23827-Z23886 represent the microsatellite marker PCR primers described in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PCR primers AAZ10412-13 were used to amplify DNA encoding a pneumoccoc surface adhesion A protein (BeaA). The specification describes monocle antibodies which bind epitopes of the PSAA protein (see AAY30351-54). These peptides can be used in vaccines to prevent Streptococcus pneumoniae infections. The antibodies of the invention can also be use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    26-FEB-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pneumoccocal surface adhesion A protein; PsaA; monoclonal antibody; vaccine; Streptococcus pneumoniae infection; PCR primer; ss.

                                                                  The invention provides a composition comprising exogenous natural progesterone suitable for transdermal delivery and maintaining the plasma concentration of natural progesterone above 10 ng/ml. The composition is applied topically for treating or preventing cancer in a patient whose plasma natural progesterone level is less than 10 ng/ml. The composition and method are useful for treating breast cancer by regulating the natural progesterone level in person's plasma. Prevention of cancer can also be secured. Progesterone application also exhibit protection or therapeutic activity in management of other forms of cancer. Sequences ARZ4604-805 represent control PCR primers for amplifying the human beta-

Novel biallelic markers used to human genome construct a high density disequilibrium

Claim 8; Page 2382; 2745pp; English.

AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states.

                                                                                           The invention relates to novel polypeptides, termed MBSPX and polynucleotides encoding the MBSPX polypeptides. The MBSPX polypeptide, nucleic acid and an MBSPX antibody are useful for treating or preventing a pathology associated with the protein especially in humans. The MBSPX nucleic acid can be used to express MBSPX protein (e.g. via a recombinant expression vector in a host cell in gene therapy applications), an to detect MBSPX mRNA in a biological sample or a genetic lesion in a MBSPX gene. Disorders associated with insufficient or excessive production of MBSPX protein include cancer, preclampsia, immune system disorders and inflammation, neurological disorders, cardiovascular disorders; and skin and muscle abnormalities. The anti-MBSPX antibodies can be used to detect and isolate MBSPX proteins and modulate MBSPX activity. Sequences AAP83018-023 represent gene specific PCR primers for amplifying the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MBSPX; cancer; preclampsia; immune system; neurological; cytostatic; gynecological; antiinflammatory; neuroprotective; inotropic; relaxant cardiant; dermatological; gene therapy; human; MBSP10; PCR primer; ss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses we and side effects from pharmaceutical agents acting on a disease as well as other treatment N.B.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                               The invention relates to novel polypeptides, termed MBSPX and polymucleotides encoding the MBSPX polypeptides. The MBSPX polypeptide, nucleic acid and an MBSPX antibody are useful for treating or preventing a pathology associated with the protein especially in humans. The MBSPX nucleic acid can be used to express MBSPX protein (e.g. via a recombinant expression vector in a host cell in gene therapy applications), an to detect MBSPX mRNA in a biological sample or a genetic lesion in a MBSPX gene. Disorders associated with insufficient or excessive production of MBSPX protein include cancer, preclampsia, immune system disorders and inflammation, neurological disorders, cardiovascular disorders; and skin and muscle abnormalities. The anti-MBSPX antibodies can be used to detect and isolate MBSPX proteins and modulate MBSPX activity. Sequences MAF83108-023 represent gene specific PCR primers for amplifying the
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel human polynucleotide sequences and the membrane bound or secreted polypeptides encoded by these sequences, designated MBSPX.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  13-OCT-1999; 99US-0159231P.

Infection by S. pneumoniae leads to pneumococcal disease. The 37-kDa surface adhesin A protein and its corresponding DNA can be used as a vaccine component for treatment and prevention of pneumococcal disease, as well as a reagent for identifying host antibodies raised against S. pneumoniae during infection. The protein may also be used as primers for amplifying nucleic acids from other strains of S. pneumoniae to isolate allelic variants of the protein, or for reverse transcription techniques, and the protein to the protein 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New 37 kDa pneumococcal surface adh pneumoniae, useful as a vaccine for caused by Streptococcus pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 37-kDa surface infection; ss;

                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thromboembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular disease, venous thrombosembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification
                                                                                                                                                                                   Human; variant thrombospondin 1; variant thrombospondin 4; SNP; polymorphism; vascular disease; coronary artery disease; forensics; myocardial infarction; atherosclerosis; stroke; venous thromboembolism;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        analysis and phenotype atherosclerosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atheroscierosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thrombosembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensics, paternity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification
                                                                                                                                                                                                                                                              Human; variant thrombospondin 1; variant thrombospondin 4; SNP; polymorphism; vascular disease; coronary artery disease; forensics; myocardial infarction; atherosclerosis; stroke; venous thromboembolism; pulmonary embolism; paternity test; ds.

Crarries a selection of oligonucleotide support (A; gene chip) which carries a selection of oligonucleotides (I) that are identical, or complementary, to segments of reference sequences relevant to at least two genetically determined phenotypes. (A) are used for simultaneous contains of at least two of the following diseases: phenyletonuria comple syrup disease), galactosemia, homocysteinuria, biotinidase contains and the contain acyol-coa-debydrogenase deficiency, familial contains acyol-coa-debydrogenase deficiency, familial contains and the contains acyol-coa-debydrogenase deficiency, familial contains, warfan syndrome, Smith-Lemil-Opitz syndrome and androgenital contains, was a contained to syndrome. Specifically they are used in neonatal or prenatal diagnosis. Contained the contained contained the contained contained the contained contained contained the contained 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA chip, useful for neonatal or prenatal screening diseases simultaneously, carries oligonucleotides contents phenotypically relevant reference sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 4; Page 81; 101pp; German.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a new method of treating an organism for CC an inflammatory immune disease. The method of the invention comprises CC reducing expression of a NURR subfamily nucleic acid sequence or CC corticotropin releasing hormone (CRH) receptor nucleic acid sequence, CC inhibiting transcriptional activity of a NURR superfamily member/CRH receptor amino acid sequence, or reducing the level of NURR superfamily CC member/CRH receptor sequence. The method is useful for treating an CC organism for an inflammatory immune diseases such as chronic inflammatory joint disease, preferably arthritis, selected from rheumatoid arthritis, CD joint disease, preferably arthritis, selected from rheumatoid arthritis, CD georiatic arthritis and sarcoid arthritis, ulcerative colitis and CC thyroiditis. The method is also useful for screening a compound that CC interferes with interaction of a NURR subfamily polypeptide with a CC ligand, or identifying a compound for the treatment of an inflammatory CC immune response. The agonist of the invention is useful for inhibiting CC transcriptional activity of nuclear receptor polypeptide and the CC antagonist is useful for decreasing the expression of a NURR subfamily receptor subtype R1 (CRH-R1) sense PCR primer that was used in the CC methods of the invention for amplification of human CRH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

CC triple-helix forming oligonuclectides, having at least 3 sequential CC purine and/or pyrimidine bases, capable of inhibiting transcription of CC ICAM-1. (A) has a sequence specific for the transcribed or promoter CC regions of the ICAM-1 (intracellular adhesion molecule) gene. The CC products of the invention have antipsoriatic, dermatological, CC antiasthmatic, antiinflammatory, immunosuppressive and gastrointestinal CC civity. (A) are used for treatment or prevention of ICAM-1-associated CC diseases, specifically psoriasis, neurodermatitls, allergic asthma, CC Crohn's disease, autoimmune diseases and transplant rejection. Compared CC with antisense oligonuclectides, (A) provide a longer-lasting effect CC (they bind directly to the gene, so a compensatory increase in CC transcription is not possible). (A) may be coupled to psoralen to provide CC light-regulatable, sequence-specific downregulation of genes; this should make photo-ultra-violet therapy more specific, with reduced side effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ពន្ធន្ធន្ធន្ធន្ធន្ធន្ធន្ធន្ធន្ធ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁

MAP binds to monoclonal antibody obtained in response to immunising an animal with pneumococcal surface adhesion protein A (PBaA) or its fragment. MAP is useful for conferring protective immunity against S. pneumoniae infection in a subject. The present sequence is Streptococcus pneumoniae serotype 6B gene amplifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Triple-helix forming polydeoxyribonucleotides, useful for treating intracellular adhesion molecule-1 related diseases, e.g. psoriasis, directed against transcribed or promoter regions of the ICAM-1 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 21 BP; 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2002-017614/02

The invention relates to an isolated nucleic acid from a human gene encoding aminopeptidase P (XPNEP2), bradykinin receptor B1 (BBKRB1), tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein 1 (KLK1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme 2 (ACE2) or protease inhibitor 4 (PI4), comprising at least one polymorphic position. Also included are (1) a probe that hybridises to a polymorphic position as provided in the detailed summary of single nucleotide polymorphisms comprising additional 5' and 3' flanking genomic
                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid with at least one polymorphic position, useful for detecting, diagnosing and treating disorders such as angioedema, cancer, viral, bacterial or fungal infection, cardiovascular and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   04-DEC-2000; 2000US-0251015P.

CC nucleic acid sequence at one or more polymorphic positions in a gene ce necoding a protein selected from the group above; (3) constructing (M2) CC haplotypes using the genes comprising grouping at least two nucleic acids cc; (4) identifying (M3) an individual at risk of developing a disorder CC using the polymorphic data; (5) a library of nucleic acids, each of which comprises one or more polymorphic positions within a gene encoding a individual comprises one or more polymorphic positions within a gene encoding a comprises one position with a known data set. The genes, (M1, M2, M3 and Cleast one positions are useful for detecting, diagnosing, treating, and compositions are useful for detecting, diagnosing, treating, composition, heart failure, myocardial infarction, ventricular convertension, heart failure, myocardial infarction, ventricular convertension, heart failure, myocardial infarction, ventricular convertension, treations, sepsis, aneurysm, embolism, thrombosis, coronary disease, arteriosclerosis and/or atherosclerosis, and proteins, cancer, wounds, viral, bacterial or fungal infection, Chronic cobstructive pulmonary diseases (COPD) and enterocolitis (many other collesses and disorders are listed in the specification. Antibodies and biological samples. The present sequence is included in the sequence collisting but is not referred to anywhere else in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      analysing (M1) a sample from one

New isolated nucleic acid with at least one polymorphic position, us for detecting, diagnosing and treating disorders such as angioedema, cancer, viral, bacterial or fungal infection, cardiovascular and useful

Disclosure; Page 809; 977pp; English

CC polymorphic position Also included are (1) a probe that hypridises to a comparphic position as provided in the detailed summary of single connuclectide polymorphisms comprising additional 5' and 3' flanking genomic comparising the sample from one or more individuals and determining the comprising control of the connectic acid sequence at one or more individuals and determining the comprising concerning the genes comprising grouping at least two nucleic acids enabletypes using the genes comprising grouping at least two nucleic acids (4) identifying (M3) an individual at risk of developing a disorder cupon administration of an ACE inhibitor and/or vasopeptidase inhibitor comprises one or more polymorphic positions within a gene encoding a comprise one or more polymorphic positions within a gene encoding a comprises one or more polymorphic positions within a gene encoding a comprise one or more polymorphic positions within a gene encoding a comprise one position with a known data set. The genes, (M1, M2, M3 and M4) and compositions are useful for detecting, diagnosing, treating, correventing various disorders such as angioedaema and diseases which involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's comperting in the confidency of the con The invention relates to an isolated nucleic acid from a human gene encoding aminopeptidase P (XPNEP2), bradykinin receptor B1 (BDXXB1) tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kalli 1 (KLK1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme 2 (ACE2) or protease inhibitor 4 (PI4), comprising at least one kallikrein

                                                          plates; (e) the clones in the multiwell plates of the specified discrimination Nos. are mixed respectively in each wells of longitudinal and lateral directions; (f) the mixed clones are cultured and the resultant cultures are amplified by using the above primer; (g) signals are detected from the amplified products; (h) the clones in the multiwell plates are specified from the detected result; and (i) the clones are reconstituted as the positions on the chromosome and arrayed. The microarray is useful for gene analysis. ABIA2957 to ABIA5322 represent PCR primers for human chromosome 1p36-35 DNA, and ABIA5323 to ABIA5634 represent PCR primers for human chromosome 1p36-15 DNA, which are
                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method of arraying genome clones. The method comprises: (a) clones of the genomic libraries contained in multiwell plates numbered for discrimination are mixed in each of the multiwell plates; (b) a primer designed based on the chromosome marker sequence is added to the mixture to carry out an amplification reaction; (c) a signal corresponding to the marker is detected from the resultant amplified product to specify the discrimination Nos. of the multiwell plates containing the clones having said marker sequence; (d) the order of the markers is changed so that the same discrimination Nos. succeed to the maximum in the specified discrimination Nos. to array the multiwell the maximum in the specified discrimination Nos.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic obstructive pulmonary disease (COPD) and enterocolitis (many other diseases and disorders are listed in the specification). The polynucleotides are also useful for chromosome identification. Antibodies against the proteins may be utilised for immunophenotyping of cell lines and biological samples. The present sequence is included in the sequence listing but is not referred to anywhere else in the specification

                                                                                                  Query Match
                                                                                                                                                               The invention relates to a kit for diagnosis and monitoring treatment, of testicular tumours comprising a pair of oligonucleotide primers (ABN85563 ABN85572), each suitable for PCR amplification of one of the complementary strands of a DNA test sequence that encodes one of four marker proteins, i.e. alpha-fetoprotein (APP); the beta-subunit of human chorionic gonadotropin (bHCG); placenta-specific and/or germ cell-specific alkaline phosphatase (PLRP/GCAP). The kit is used for diagnosis and monitoring treatment of testicular tumours. The method detects marker mRNA in blood, so can provide an early indication of metastasis
                                                                                                                                                                                                                                                                                                                                                                          primers for amplifying specific of metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 21 BP; 7 A; 5 C; 6 G; 3 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                          For directionally assemblinant viral genome, particularly coronavirus, the method is useful for manipulating the genomes of higher plants and animals, as well as bacteria and viruses. In particular, the method is useful for the precise genetic manipulation of individual chromosomes in whole plants and animals and the construction of artificial chromosomes for gene therapy. The genomes produced are useful in preparing vaccines and expression vectors (e.g., TGE vectors and vaccines), which are useful in protocols involving vaccination, gene transfer and gene therapy. This sequence represents the forward RT-PCR primer AAS21195 to amplify across the C/DE junction of the recombinant transmissible gastroenteritis (TGE) genome, described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes a method of directionally assembling a recombinant viral genome comprising ligating the subclones of the viral genome to assemble a recombinant viral genome, particularly coronavirus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Directionally assembling a recombinant viral genome, useful for manipulating the genomes of plants, animals, bacteria or viruses for gene therapy, by ligating the subclones of the viral genome to assemble a recombinant viral genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transmissible gastroenteritis virus; TGE; gene transfer; recombinant viral genome; gene therapy; artificial chromosome; vaccine; reverse transcriptase PCR; RT-PCR; PCR; primer; ss.

Guida M,

WPI; 2002-698522/75.

Isolated nucleic acid molecules having polymorphisms in known human genes e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers for locating, identifying and characterizing the genes responsible for disorder-related traits.

Example 18; Page 134; 714pp; English

CC crycocnrome Pasu (AEA) (LTP30UZAL), auteneys acceptor nuclear translocator (CC aryl hydrocarbon (AHR), aryl hydrocarbon (AERT), ceathagsin S (CTSS), cyclooxgenase 2 (CCX2), diazepam binding CC inhibitor (DBI), epoxide hydroxylase 2 (EEHX2), 5-lipoxygenase activating CC protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl CC (transferase (NNMT), NADPH quinone oxidoreductase 2 (NQO2), CC transferase (NNMT), NADPH quinone oxidoreductase 2 (NQO2), CC (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl transferase (UGT2B1), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl (MRP3), lactotransferrin (LTP), multidrug resistance associated protein 3 (CMRP3), orphan nuclear receptor (NR112), or acetylcholine muscarinic creceptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR3) sequence. CC (MRP3), orphan nuclear receptor (NR112), or acetylcholine muscarinic creceptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR3) sequence. CC (MRP3), orphan nuclear receptor (NR112), or acetylcholine muscarinic creceptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR3) sequence. CC (MRP3), urban psecific traits within the genome and eventually cc identifying the genes responsible for a variety of disorder-related CC (are responsible for specific traits within the genome and eventually cc identifying the disorders. The nucleic acid molecules comprising the coloration as a result of their e.g., overzapression, constitutive used in disgnosing capture and the molecules comprising the polymorphic sequences contained in CYP4501A2, CYP4501A3, CYP4501A3, CHMR4 (MR), MR), MR), MRO2, MR12, STM, UGT2B7, UGT2B1, U This invention relates to the sequence of an isolated nucleic acid molecule comprising at least one base variation from that of a known human cytochrome P450 A2 (CYP4501A2), cytochrome P450 A2 (CYP45002E1), adrenergic receptor beta1 (ADBR1), cytochrome P450 02E1 (CYP45002E1), adrenergic receptor beta1 (ADBR1).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ន្តន្តន្ត
                                        The invention relates to an isolated or substantially pure Von Willebrand CC factor-cleaving protease (VWF-cp) polypeptide. VWF-cp is useful for curifying vWF which involves providing vWF-cp as a ligand, contacting a solution comprising vWF with the polypeptide ligand under conditions compared to the ligand and recovering from the ligand purified CC vWF. vWF-cp is useful for producing anti-vWF-cp and isolating the anti-cc vWF cp polypeptide antibodies cC vWF cp polypeptide antibodies from the animal vWF-cp is useful for cc vWF-cp polypeptide antibodies from the animal. vWF-cp is useful for cc vWF-cp polypeptide antibodies from the animal. vWF-cp is useful for cc vWF-cp polypeptide antibodies from the animal. vWF-cp is useful for cc producing a preparation of prophylaxis and therapy of thrombosis and cc thromboembolic disease such as thrombocytic purpura (TTP), cc Henoch-Schonlein purpura, preeclampsia, neonatal thrombocytopaenia or cc haemolytic-uraemic syndrome. vWF-cp can also be used for processing construction expression systems and generating transgenic animals which captures the polypeptide in vivor the present sequence is human vWF-cp pre
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best Loc

The invention relates to an isolated cytoplasmic, nuclear, membrane bound or secreted polypeptide, designated NOVX (actually NOV1, 2a, 2b, 3a, 3b, 3c, 5b, 5c, 5d, 5e, 5f, 5g, 5h, 5i, 6, 7 and 8), a variant of NOVX, a compared NOVX (actually NOV1, 2a, 2b, 3a, 3b, 3c, 5b, 5c, 5d, 5e, 5f, 5g, 5h, 5i, 6, 7 and 8), a variant of NOVX, a compared novel of NOVX (actually NOVX, also included are a complement), a vector comprising the presence of NOVX (actually NOVX, Also included are a complement), a vector comprising the polynucleotide, a cell comprising the vector, an anti-NOVX antibody, complement), a vector comprising the polynucleotide in a sample using a probe which binds to NOVX polynucleotide in a sample using a probe comprising the presence of NOVX polynucleotide in a sample using a probe compared to NOVX polynucleotide in a sample using a probe complement, and the proposed complement in a sample using a probe compared to the proposed polynucleotide and the polynucleotide and the complement in a sample using a probe complement in a sample using the and antagonist compounds, and as bait compounds in a not three-hybrid assays. The polynucleotide is useful in gene therapy, to express NOVX, to detect NOVX manh or a genetic lesion in a NOVX gene, and to modulate NOVX activity. The vector is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        25-AUG-2000; 2000US-0227800P.

                                                                                   The sequences given in ABA00315-17 are primers which were used to detect the presence of clonally expand CD4+CD28(null) T cells in unstable plaques. Sequences like these, may be used in the method of the invention for determining if a mammal has an unstable plaque. The method comprises determining whether or not a sample from the mammal contains an elevated level of a polypeptide which is encoded by a DNA responsive to an interferon-gamma-activated transcription factor. The level indicates that the mammal contains the unstable plaque. The method is useful in evaluating the severity of cardiovascular conditions, such as angina, specifically by determining whether a person has an unstable plaque. The method may also be used to identify compounds that are useful in treating or reducing the risk of developing life- threatening cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              useful for producing non-human transgenic animals. The antibody is to for isolating, and purifying NOVX and to monitor protein levels in tas part of a clinical testing procedure. The present sequence is an (reverse transcriptase)-PCR primer used to quantitate mRNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Determining whether or not a mammal has an unstable plaque, useful evaluating the severity of cardiovascular conditions, e.g. angina, comprises determining the level of CD64 or IP-10 polypeptide encode DNA responsive to STAT-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Transcription factor; STAT-1; monocyte; stable angina; SA; SIE oligonucleotide; interferon; IFY-gamma; unstable plaque;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       BC antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    09-DEC-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABA00315;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        문
                                                                               The invention relates to a plant comprising two foreign nucleotide CC sequences which cause seeds obtained from the plant to accumulate lysine CC at a level of at least 10% higher than seeds of a plant that do not CC comprise the nucleotide, where the nucleotide comprises a fragment CC encoding a dihydrodipicolinic acid synthase (DHDPS) that is insensitive CC to lysine inhibition, and a fragment encoding a plant lysine inhibition, and a fragment encoding a plant lysine could be comprised to a plant chloroplast transit sequence (CTS) and the CC plant lysine ketoglutarate reductase subfragment is used in antisense CC inhibition or cosuppression. Also included are progeny plants from the CC above mentioned plant and seeds obtained from the above mentioned plant. The seeds obtained from the above mentioned plant councillate acid source of corn) comprising the foreign nucleic acid sequences accumulate CC than seeds of a plant that do not comprise the foreign nucleic acid sequences accumulate CC aspartokinase III (from the lysC gene) of E. coli (mutated to be lysine-cc disclosed are synthetic seed storage proteins (SSP) used as an internal source of lysine, built up from synthetic poptide monomers based around can can be present of the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Transformed plants that accumulate lysine at higher levels in its seeds than untransformed plants, has gene fragments encoding lysine-insensitive dihydrodipicolinic acid synthase and lysine ketoglutarate reductase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ss; lysC; transgenic; lysine accumulation;

The invention relates to an isolated polypeptide comprising one of 127 cc form of NOVX, an amino acid sequence which is at least 95% identical to CC NOVX or an amino acid sequence which is at least 95% identical to CC NOVX or an amino acid sequence comprising one or more conservative cc substitutions in NOVX. Also included are nucleic acids encoding NOVX CC proteins, determining the presence or amount of NOVX or NOVX DNA in a cc sample (by introducing the pensence or amount of NOVX or NOVX DNA in a cc amount of antibody bound to the polypeptide, and determining the presence or cc amount of antibody bound to the polypeptide), determining the presence of cc or predisposition to a disease associated with altered levels of cr treatment of a pathology related to aberrant expression or aberrant cc physiological interactions of NOVX, screening for a modulator of activity of or treatment of a pathology related to aberrant expression or aberrant cc physiological interactions of NOVX, screening for a modulator of activity of or or predisposition to a pathology associated with NOVX, a coll comprising the vector (used to produce NOVX) and an anti-NOVX antibody. The NOVX nucleic acids and polypeptides care useful as a marker for cell or tissue type, and in diagnosing and comprising pathologies, diseases, conditions or disorders associated with NOVX, a collated cachexia, neurodegenerative disorders (e.g. Alibeimer's collegates, multiple sclerosis, infectious diseases, anorexia, cancer-collegated with nother tessue type, and in diagnosing and collegases or parkingon's disease, NIDS, bronchial asthma, Crohn's collegase or parkingon's disease, NIDS, bronchial asthma, Crohn's collegase or parkingon's disease, NIDS, bronchial asthma, Crohn's collegase or parkingon's disease, NIDS, bronchial asthma, cancer-collegases or parking or disease, NIDS, bronchial asthma, cancer-collegases or parking or disease, NIDS, bronchial asthma, cancer-collegases or parking or disease, NIDS, bronchial asthma collegas or diseases. New polypeptides and polynucleotides having properties related to stimulation of biochemical or physiological responses in a cell or tissue, useful for diagnosing or preventing e.g. atherosclerosis, hypertension, prostate cancer.

Example C; Page 596; 849pp; English.

The invention relates to an isolated polypeptide comprising one of 127 CC sequences (appearing as ABO1288-ABO1414) designated as NOVX, a mature CC form of NOVX, an amino acid sequence which is at least 95% identical to CC which is a mature conservative constitutions in NOVX. Also included are nucleic acids encoding NOVX CC proteins, determining the presence or amount of NOVX ONA in a CC sample (by introducing the sample to an antibody that binds cC immunospecifically to the polypeptide, and determining the presence or cC amount of antibody bound to the polypeptide, and determining the presence of cc arguession of NOVX or NOVX DNA in a first mammalian subject, identifying can agent that binds to NOVX, identifying a potential therapeutic agent for treatment of a pathology related with altered levels of concept reatment of a pathology related to abbrrant expression or aberrant comprising NOVX DNA, a cell comprising for a modulator of activity of or of latency or predisposition to a pathology associated with NOVX, a vector comprising NOVX DNA, a cell comprising for a modulator of activity and an anti-NoVX antibody. The NOVX nucleic acids and polypeptides care useful as a marker for cell or tissue type, and in diagnosing and treating pathologies, diseases, conditions or disorders associated with NOVX sequences, including cardiomyopathy, atherosclerosis, hypertension, congenital heart defects, prostate cancer, diabetes, metabolic disorders, congenital heart defects, prostate cancer, diabetes, metabolic disorders, conditions or disorders, metabolic disorders, including cardiomyopathy, atherosclerosis, hypertension, conditions or disorders, metabolic disorders, incomplement of the prostate cancer, diabetes, metabolic disorders, incomplement of the prostate cancer, diabetes, metabolic disorders, incomplement of the prostate cancer, diabetes, metabolic disorders, metabolic disorders, incomplement of the prostate cancer, diabetes, metabolic disorders, incomplement of the prostate cancer disorders, and protections of the p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   associated cachexia, neurodegenerative disorders (e.g. Alzheimer's disease or Parkinson's disease), immune disorders, haematopoietic disorders, dyslipidaemias, and wasting disorders associated with chronic disease. These may also be used to screen for molecules which inhibit or enhance NOVX activity or function, and for detecting specific cell types. These may also be used in chromosome mapping, gene therapy, tissue typing, and in forensic biology. The present sequence is a reverse transcriptase (RT)-PCR probe used to assess the tissue specific expression of mRNA encoding a NOVX protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; 88; PCR; NOVX; cardiomyopathy; atherosclerosis; hypertension; congenital heart defect; prostate cancer; diabetes; metabolic disorder; neoplasm; graft versus host disease; bronchial asthma; probe; Crohn's disease; multiple sclerosis; infectious disease; anorexia; cancer-associated cachexia; neurodegenerative disorder; RT-PCR; Alzheimer's disease; Parkinson's disease; immune disorder;

New polypeptides and polynucleotides having stimulation of biochemical or physiological tissue, useful for diagnosing or preventing hypertension, prostate cancer. properties related responses in a cell e.g. atherosclerosis, or

Example C; Page 608; 849pp; English

The invention relates to an isolated polypeptide comprising one of 127 CC sequences (appearing as ABO1288-ABO1414) designated as NOVX, a mature CC form of NOVX, an amino acid sequence which is at least 95% identical to CC NOVX or an amino acid sequence comprising one or more conservative cC substitutions in NOVX. Also included are nucleic acids encoding NOVX CC proteins, determining the presence or amount of NOVX DNA in a CC sample (by introducing the sample to an antibody that binds correctly correctly bound to the polypeptide, and determining the presence or correctly correctly bound to the polypeptide, and determining the presence or correctly correctly bound to the polypeptide, and the presence or correctly correctly bound to the polypeptide, and the presence or correctly disorders, dyslipidaemias, and wasting disorders dyslipidaemias, and wasting disorders disclosed to screen for molecules which diseases. These may also be used to screen for detecting specific of these may also be used in chromosome mapping, gene therapy, tistyping, and in forensic biology. The present sequence is a revetranscriptase (RT)-PCR probe used to assess the tissue specific expression of mRNA encoding a NOVX protein cell types.

The invention relates to an isolated polypeptide comprising one of 127 sequences (appearing as ABO1288-ABO1414) designated as NOVX, a mature form of NOVX, an and acid sequence which is at least 95% identical to NOVX or an amino acid sequence comprising one or more conservative substitutions in NOVX. Also included are nucleic acids encoding NOVX proteins, determining the presence or amount of NOVX ON NOVX DNA in a sample (by introducing the sample to an antibody that binds immunospecifically to the polypeptide, and determining the presence or amount of antibody bound to the polypeptide), determining the presence or predisposition to a disease associated with altered levels of of.

> CC expression of NOVX or NOVX DNA in a first mammalian subject, identifying can agent that binds to NOVX, identifying a potential therapeutic agent converted to the pathology related to aberrant expression or aberrant composition of pathology related to aberrant expression or aberrant composition interactions of NOVX, screening for a modulator of activity of or of latency or predisposition to a pathology associated with NOVX, a certor compositing NOVX DNA, a cell compositing the vector (used to produce NOVX) and an anti-NOVX antibody. The NOVX nucleic acids and polypeptides care useful as a marker for cell or tissue type, and in diagnosing and congenital heart defects, prostate cancer, disporders associated with congenital heart defects, prostate cancer, diabetes, metabolic disorders, associated acchexia, neurodegenerative disorders (e.g. Alzheimer's consociated cachexia, neurodegenerative disorders, haematopoietic diseases. These may also be used to screen for molecules which inhibit or cenhance Novx activity or function, and for detecting specific cell types. These may also be used to screen for molecules which inhibit or cenhance Novx activity or function, and for detecting specific cell types. These may also be used to screen for molecules which inhibit or cenhance novx activity or function, and for detecting specific cell types. These may also be used to screen for molecules which inhibit or cenhance novx activity or function, and for detecting specific cell types. These may also be used to assess the tissue specific cell types. Composition of manaled to assess the tissue specific cell types. The probe used to assess the tissue specific cell types.

The invention relates to an isolated polypeptide comprising one of 127 CC sequences (appearing as ABO1288-ABO1414) designated as NOVX, a mature of form of NOVX, an amino acid sequence which is at least 95% identical to CC NOVX or an amino acid sequence comprising one or more conservative substitutions in NOVX. Also included are nucleic acids encoding NOVX CC proteins, determining the presence or amount of NOVX DNA in a CC sample (by introducing the sample to an antibody that binds cramount of antibody bound to the polypeptide, and determining the presence or CC amount of antibody bound to the polypeptide), determining the presence of CC or predisposition to a disease associated with altered levels of CC expression of NOVX or NOVX DNA in a first mammalian subject, identifying an agent that binds to NOVX, identifying a potential therapeutic agent for treatment of a pathology related to aberrant expression or aberrant CC physiological interactions of NOVX, screening for a modulator of activity CC of or of latency or predisposition to a pathology associated with NOVX, a cert or comprising NOVX DNA, a cell comprising the vector (used to produce CC NOVX) and an anti-NOVX antibody. The NOVX nucleic acids and polypeptides are useful as a marker for cell or tissue type, and in diagnosing and CC treating pathologies, disease, conditions or disorders associated with NOVX, aspectively, atherosclerosis, hypertension, congenital heart defects, prostate cancer, diabetes, metabolic disorders, cassociated with disease, multiple sclerosis, infectious diseases, anorexia, cancer-cassociated with chronic constitued of caree may also be used to serve for molecules which inhibit or cenhance NOVX activity or function, and for detecting specific cell types. CC consentation of forensic biology. The present sequence is a reverse craptese of the process of the process of the careers of the careers of the process of the careers of the c

New polypeptides and polynucleotides having properties related to stimulation of biochemical or physiological responses in a cell or tissue, useful for diagnosing or preventing e.g. atherosclerosis, hypertension, prostate cancer. a cell or

Example C; Page 702; 849pp; English.

The invention relates to an isolated polypeptide comprising one of 127 cc sequences (appearing as AB01288-AB01414) designated as NOVX, a mature cc form of NOVX, an amino acid sequence which is at least 95% identical to CC NOVX or an amino acid sequence comprising one or more conservative substitutions in NOVX. Also included are nucleic acids encoding NOVX CC proteins, determining the presence or amount of NOVX ONA in a cc sample (by introducing the sample to an antibody that binds to the polypeptide, and determining the presence or amount of antibody bound to the polypeptide), determining the presence or amount of antibody bound to the polypeptide), determining the presence of cor predisposition to a disease associated with altered levels of cor predisposition to a disease associated with altered levels of cor predisposition to a disease associated with altered levels of cor predisposition to a pathology related to aberrant expression or aberrant compression or aberrant physiological interactions of NOVX, screening for a modulator of activity of or of latency or predisposition to a pathology associated with NOVX, a vector comprising NOVX DNA, a cell comprising the vector (used to produce CC NOVX) and an anti-NOVX antibody. The NOVX nucleic acids and polypeptides are useful as a marker for cell or tissue type, and in diagnosing and consecuted with least of the produce of treating pathologies, diseases, conditions or discorders associated with congenital heart defects, prostate cancer, disabetes, metabolic discorders, congenital heart defects, prostate cancer, disabetes, metabolic discorders, associated with associated or parkinson's discase, inflectious diseases, anorexia, cancer-collassociated cachexia, neurodegeneration discorders (e.g. Alzheimer's disease) immune discorders (e.g. Alzheimer's disease or Parkinson's disease), immune disorders, haematopoietic disorders, dyslipidaemias, and wasting disorders associated with diseases. These may also be used to screen for molecules which in inhibit 얁

                          first nucleic acid subfragment encoding aspartokinase (AK) that is substantially insensitive to inhibition by lysine, and a second nucleic acid subfragment encoding dihydrodipicolinic acid synthase (DHDPS) that is substantially insensitive to inhibition by lysine. Also included are an isolated nucleic acid fragment comprising a nucleic acid subfragment encoding lysine ketoglutarate reductase (LKR), a chimaeric gene (where the nucleic acid fragment is operably linked to a plant chloroplast transit sequence and to a seed-specific regulatory sequence, a plant comprising the nucleic acid/chimaeric gene in its genome, a seed obtaine from the plant, increasing threonine or lysine content of the seeds of plant, a plant capable of transmitting the chimaeric gene to a progeny c plant having the ability to produce levels of free threonine or lysine as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         typing, and in ____transcriptase (RT)-PCR probe user__rotein expression of mRNA encoding a NOVX protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            enhance NO

```
CC plants, a transformed (soybean) plant comprising seeds that accumulate CC lysine at a level at least ten percent to four-fold higher than the seeds of an untransformed plant, a transformed rapeseed comprising seeds that CC accumulate lysine to a level between ten percent and one hundred percent CC comprising in its genome the nucleic acid fragment having the monocotecmbry specific promoter and a transformed plant, a monocot plant comprising seeds that accumulate lysine to a level between ten percent and one hundred cc thirty percent higher than the seeds of the untransformed plant. Also CC from monomer lysine-rich seeds of the untransformed plant. Also CC enzyme-based oligonucleotides) used as a pool of lysine in a transformed CC plant. The nucleic acid fragments genes and methods are useful for CC increasing threonine or lysine content of the seeds of the plant. Seeds CC containing increased threonine or lysine or threonine produced via CC supplement mixed grain feeds with lysine or threonine produced via CC microbial fermentation. The present sequence is one strand of a DNA CC encoding a lysine-rich heptad repeat for use as a monomer unit in a content content content content of a DNA cc surfice.

Inhibiting HIV replication by inhibiting ATM and Rad-3 related protein (ATR), Rad17 or an inhibitor of an ATR-controlled pathway, useful for inhibiting infectivity of ATR or Rad17, and for preventing or treating infection.

Example <u>2</u> 27; 50pp; English

The invention relates to inhibiting HIV replication comprising contacting a cell susceptible to HIV infection with an inhibitor of ATM and Rad3-related protein (ATR) or Rad17, or an inhibitor of an ATR-controlled pathway, to inhibit HIV replication in the cell. The methods and compositions of the present invention are useful for inhibiting

                                                                   The invention relates to the 37-kDa protein of Streptococcus pneumoniae and the nucleic acid encoding it. The sequences of the invention are used in preparation of vaccines. The polypeptide is used to detect the presence of S. pneumoniae in a sample by contacting an antibody containing sample from the subject with the polypeptide and detecting the binding of the antibody with the polypeptide, where binding indicates the presence of S. pneumoniae. An antibody to the polypeptide is also used to detect the presence of S. pneumoniae in a sample by contacting a sample of the subject with the antibody and detecting binding of the antibody with an antigen, where binding indicates the presence of S. pneumoniae in the subject. A vaccine comprising an immunogenic polypeptide encoded by the nucleic acid or an anti-idiotope antibody to the polypeptide encoded by a PCR primer used to amplify DNA encoding the 37-kDa polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (SAMP/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                infectivity of ATR or Rad17, and for preventing or treating HIV infection. This polynucleotide sequence represents an ATR region targeted by the sirNA inhibitors of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (THAR/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           17-SBP-1996;

The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human Myc or Myb genes by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the Myc or Myb genes in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating cancers and other proliferative diseases, such as restenosis and polycystic kidney disease. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, nharmacorenomics, sinks are also useful for the treatment of a property of conditions.
                                                                                                                                                                          organophosphorus chemical. The resolvase can be prepared from recombinant yeast with low cost in large-scale industrialized and can be used to detoxify the residual chemical.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents a chemically modified sixNA targeted to the human Myc mRNA transcript.
                                                                                                                                                                                                                                  The present invention relates to a resolvase for agricultural organophosphorus chemical. The resolvase can be prepared from
                                                                                                                                                                                                                                                                                                                                                     Zymolase of agricultural chemical containing organic phosphorus and coding gene and preparing process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                       Example 1;
                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2003-269403/27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     17-APR-2001; 2001CN-00110725.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   17-APR-2001; 2001CN-00110725.

                                                                                                                                                                                                                                                                            The invention relates to a double-stranded short interfering nucleic acid (siNA) molecule that down-regulates expression of an endogenous mammalian CC target gene comprising one or more chemical modifications and each strand of the double-stranded siNA comprises about 21 nucleotides. The siNA of the invention demonstrates antiarteriosclerotic, neuroprotective, concotropic, antiparkinsonian and anticonvulsant activities and may be cuseful for down-regulating the expression of an endogenous mammalian cCC target gene and therefore in the treatment of any disease or condition that responds to modulation of gene expression or activity in a cell, ctissue or organism. The disease or condition may include pulmonary CC diseases such as restenosis, atherosclerosis, Alzheimer's disease, pollepsy, dementia, huntington's disease or comparism the siNA bNA-cCC amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for center therapy applications. The current sequence is that of the siNA DNA-cvc.
